Profile Summary

Project-driven MERN stack developer experienced in building full-stack applications from scratch including admin dashboards, authentication with JWT, CRUD systems, and responsive UIs. Developed and deployed multiple production-ready projects and client websites. Comfortable working across frontend and backend, debugging real issues, and shipping features end-to-end. Passionate about writing practical code and continuously improving through hands-on development.

Education

B.Tech/B.E., 2023

Indian Institute of Technology, Kharagpur

12th, 2018

Telangana, English

10th, 2016

Projects

1 Weeks

Admin CRUD Dashboard

• Built a full-stack admin-controlled inventory management system using Node.js, Express, MongoDB, and JWT authentication.
• Implemented secure admin login with JSON Web Tokens and middleware-based route protection.
• Developed complete CRUD functionality (Create, Read, Update, Delete) for product management with role-based access.
• Designed a responsive admin dashboard UI using HTML, Tailwind CSS, and Vanilla JavaScript.
• Integrated real-time product count analytics on the dashboard using backend APIs.
• Deployed backend services on Render and frontend on Netlify, handling environment variables, CORS, and production configuration.
• Frontend deployed on - https://admin-crud-app.netlify.app
• Backend deployed on - https://admin-crud-app.onrender.com

1 Weeks

Movie Review App(Cine Buzz)

Tech Stack: JavaScript, Node.js, Express.js, MongoDB Atlas, Render, Netlify , HTML, CSS,
• Built a full-stack movie review platform integrating the TMDB API for live movie data.

• Implemented user reviews stored in MongoDB Atlas through RESTful API routes.
• Deployed backend on Render and frontend on Netlify with environment-secure setup.
• Designed responsive UI and documented the project with a detailed README.
• Live Site - https://cinebuzzzzz.netlify.app
• Source Code - https://github.com/Jeetz-007/Movie-Review-Web-App

1 Weeks

CodeOps

Tech Stack: React.js, React Router DOM, Vite, JavaScript, HTML, CSS, GitHub Pages / Vercel
• Built a modern single-page freelancing platform showcasing job listings and developer-focused services.
• Implemented dynamic career pages by integrating a hosted JSON API for job roles, skills, experience, and descriptions.
• Designed a responsive dark-themed UI with neon accents, animations, and mobile-friendly navigation using reusable components.
• Structured the project with component-based architecture and deployed the optimized build to GitHub Pages / Vercel.
• Documented the project with a clear README and organized folder structure for scalability.
• Live Site — https://code-ops-theta.vercel.app
• Source Code — https://github.com/Jeetz-007/CodeOps

Certification

- Programming with Javascript
- Linear Algebra for Machine Learning and Data Science
